

MOBILE OPERATIONS

REAL-TIME SITUATIONAL AWARENESS FOR PUBLIC SAFETY

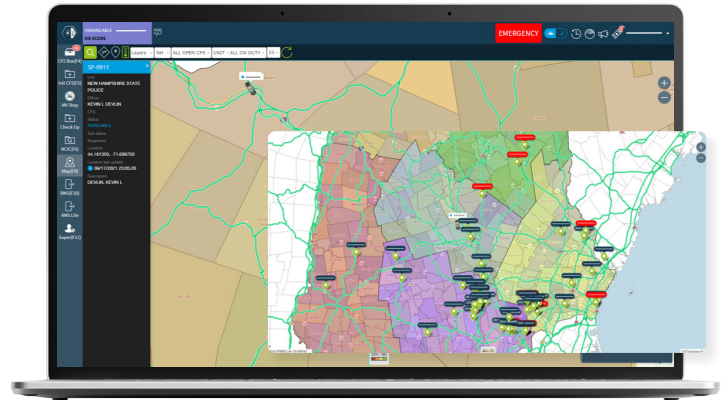

Fully integrated mobile operations for first responders

Provide police, fire, and EMS responders with critical, real-time situational awareness direct to mobile devices quickly and efficiently. Mobile operations help first responders better prepare for the unknown and significantly accelerate response times. Live access to CAD, mapping capabilities with intelligent routing, built-in chat functions, and additional NCIC queries, eTicketing, and push-to-RMS functions all at their fingertips.

REAL-TIME MAPPING

Live mapping capabilities give first responders up-to-date traffic information, directions, search functions as well as additional map layers. Automatic vehicle locator (AVL) displays units and apparatus on the map for enhanced situational awareness.

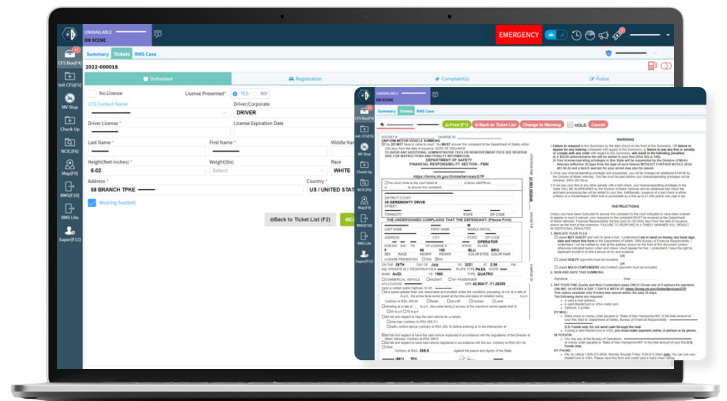

- User-definable and system-generated map layers
- GPS navigation with real-time traffic information
- Unit and apparatus monitoring and tracking (AVL/ARL)
- Pinpoint CFS location accuracy

MOBILE TICKETING & MANAGEMENT

Create eTickets directly from the MDT to issue to violators on scene and submit electronically to local and state courts. All eTickets and related DMV information are pushed from CAD and MDT to RMS for tracking and permanent documentation in the case file.

- Bar code scanner support to enter license and registration
- Printable eTicket for immediate issuance
- Electronic signature support
- Automatic electronic delivery to local and state courts
- CAD, RMS, and MDT integration

PREMIER SOFTWARE SOLUTIONS FOR EGOVERNMENT

CSI designs robust, fully integrated, and customizable software to revolutionize state, county, and local government operations.
