COMPUTER AIDED DISPATCH FOR ADVANCED PUBLIC SAFETY COMMUNICATION AND RESPONSE

www.csitech.com

An advanced CAD with Dynamic Features Which Provides for Swift Processing of All CFS Information

Embedded with features that promote swift response and accurate information sharing:

01

CFS Intake form is automatically populated with ANI / ALI Information.

02

Related information is automatically created from the RMS database, which includes Gun Permits, Hazmat, Medical Alerts and any other client specific external data sources.

03

Fire Dispatch Console provides an efficient way to organize Fire CFS dispatch, Fire MDT support, Run Card, and Fire/EMS Response Plan information.

04

Mapping includes client-based layers, POI, boundary and lines files. Allows for integration with third-party mapping solutions.

05

Cloud Hosting capabilities significantly reduces IT support and maintenance loading. Also provides cost savings, enhanced multi-sites network security architectures.

A Time Line in the Call Log organizes events so you know what happened at any point during an emergency

Call Intake and Dispatch

Connects to the E-911 system and displays incoming calls

Caller information is displayed on the screen and populated into the intake form

Built-in sub-modules including BOLO, Tow Rotation management, EMS Guide Card, Police SOP, Premise Floor Plan, Emergency Contacts, along with optional modules such as school bus monitoring, traffic cam, InfoAlert, Active Response Apps (iOS & Android)

Search and automatically update and display relationships between the caller and phone, buildings, businesses, alarms, addresses, vehicles, hazmats, warrants, etc.

Monitor displays lists of pending, current and past incidents, according to the dispatcher's assignment and preference

Real time unit location and proximity dispatching capabilities provides for instant routing and ETA information to both Dispatchers and Officers for rapid response

Priority Dispatch feature ensures that messages and calls tagged with emergency or high priority will pass through first, even in times of high call volume

Text-to-Speech capability in MDT will read out loud of the CFS summary information includes incident location, CFS type and multiple flag alerts for improved officers' safety

Configurable presets for Color and layout of screens, accommodating a 4 monitor design
