

PROSECUTION

WEB-BASED PROSECUTOR CASE AND DOCUMENT MANAGEMENT

Designed in accordance with the National District Attorneys Association's Functional Requirements for Prosecutor Management Systems, InfoShare® eProsecution is a powerful and flexible system designed specifically for Prosecutors' Offices and District Attorneys' Offices to manage workloads, streamline workflows, and maintain integrity in the criminal justice process from screening to final sentencing. Expert interfacing enables seamless, NIEM-compliant data exchange and specialized modules enhance the capabilities of the existing system.

CAPABILITIES

DATA & DOCUMENT SHARING

CSI has considerable experience in interfacing its Prosecution applications to internal and external data sources including but not limited to law enforcement agencies, courts, family courts, municipal courts, jails, and state repositories. Our system is fully compliant with NIEM and GJ-XML data exchange standards.

TOTAL SOLUTION

CSI solutions are powered by the InfoShare® Engine, a low-code development platform for government ERP application. Various specialized modules enhance the capabilities of the eProsecution case and document management system. All applications and modules are unified under a single web-based system accessible via desktop and mobile platforms to meet the demands of today's public sector agencies.

CLOUD INTEGRATION

InfoShare® Cloud supports public, private, or hybrid cloud requirements, hosted on the CJIS-compliant AWS GovCloud or Azure Government—both designed for maximum government security. Moreover, OneDrive integration enables users to upload documents into the InfoShare® system through a safe and secure channel.

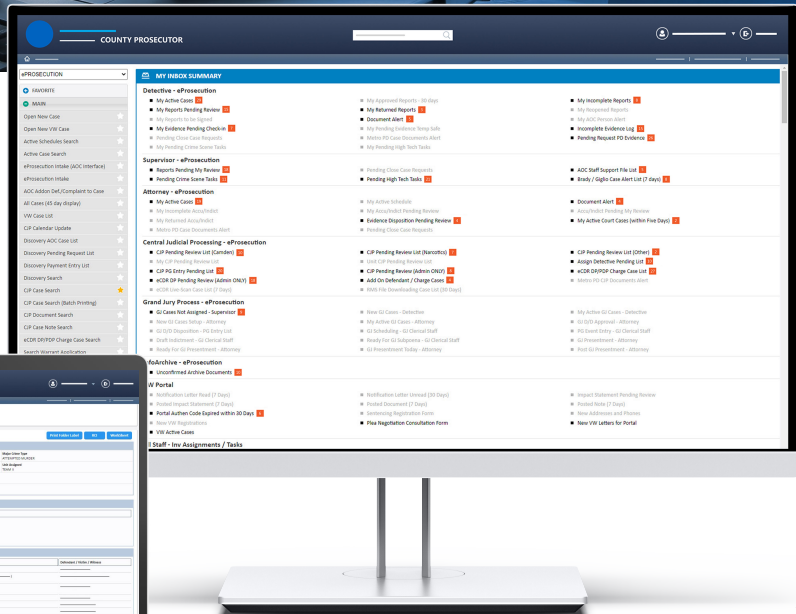

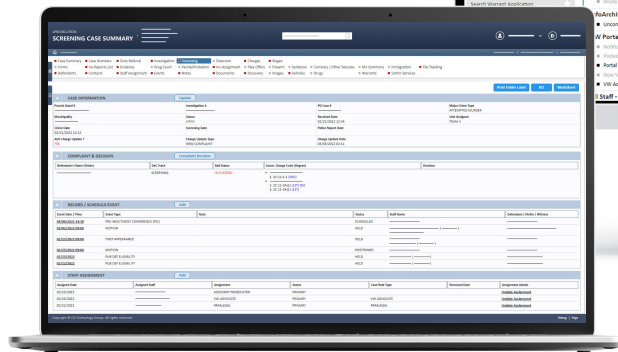

SECURITY

CSI's fully compliant security methodology ensures stringent security measures on data encryption, data exchange, wireless networking, and system access. Two-factor authentication is used to increase access security. Data access privileges are established through role- or case-based safeguards, making sure that only legitimate and authorized individuals have access to relevant functions or data.

DATA ANALYTICS

Enhance decision-making, generate insights, and allocate resources efficiently to support agencies' objectives. eProsecution data analytics analyzes internal and external data to track a variety of performance measures and includes tools such as robust search, crime analysis, data visualization, ad-hoc reporting, and much more.

CASE MANAGEMENT SYSTEM

- Pretrial

- VAWA/Muskie Report
- InfoVNS Mobile App

VERTICAL INTEGRATION

Vertical integration enables organizations to completely control the incident workflow, maximizing efficiency, collaboration, and safety. Most vendors only deliver solutions to one or two stages of the complete criminal justice and public safety process. Agencies need to work with multiple vendors and pay them exorbitant fees for integration and interfacing.

In comparison, CSI's vertical integration strategy ensures seamless data transfer across all product lines and eliminates the need for agencies to combine the products themselves.

	Other Vendors	CSI Technology Group
	NO VERTICAL INTEGRATION	VERTICAL INTEGRATION
Cost	Combining multiple products by different vendors costs more	Complete control of the product line decreases coordination costs
Expertise	Specific domain knowledge	Extensive, professional expertise on the whole product line
Quality Control	Difficult to guarantee quality	Ensure quality in every step of the process
Support	Multiple vendors results in different service standards	One vendor provides consistent service quality
Data Sharing	Difficult to share and transfer data with external products	Easy to share data via interfaces
Integration	Multiple disparate systems	Unified, fully integrated software suite
